

## Forensic Science Laboratory Services

### Types of Testing Provided and Contact Information

<p><b>Biology</b>          Lisa Burdett          (Great Bend and KC)          620.603.7123          Emily Draper          (Topeka)          785.296.2150</p>	<p><u>Biological Screening</u>: Examine items of evidence for the presence of biological fluids (i.e. blood, semen, saliva).  <u>CODIS</u>: Enter eligible and suitable forensic profiles into the DNA database for comparisons to offenders and other forensic samples.  <u>DNA Analysis</u>: Development of DNA profiles from evidence and comparison to known DNA standards to determine the source of a sample.  <u>Unidentified Remains and Missing Persons</u>: DNA profiles from unidentified remains or missing persons and their relatives may be entered into the DNA database.</p>
<p><b>Bloodstain Pattern Analysis</b>          Holly Latham          620.603.7130</p>	<p>The Bloodstain Pattern Analysts are responsible for examining crime scenes, crime scene photographs, evidence collected from the crime scene, the clothing of the suspect/victim, and the autopsy and/or medical reports to determine by what manner the blood was deposited. The information can be used for reconstruction of the incident and evaluation of the statements of the witnesses and the crime participants.</p>
<p><b>Chemistry</b>          Dwain Worley          785.296.3039</p>	<p><u>Alcoholic Beverage Examination</u>: Determine the ethyl alcohol content of suspected alcoholic beverages.  <u>Clandestine Laboratory</u>: Analyze evidence from suspected clandestine laboratories for the presence of precursors, finished products, reagents and solvents.  <u>Controlled Substances</u>: Analyze evidence for the presence of controlled substances.  <u>General Chemical Analysis</u>: Apply chemical analysis techniques to assist in the investigation, solving and prosecution of crimes. Examples include vandalism, suspicious deaths, pharmaceutical tampering, and suspected poisoning.</p>
<p><b>Databank</b>          Destiny Bryan          785.296.2110</p>	<p><u>CODIS</u>: The Combined DNA Index System is a searchable database linking known DNA profiles from offenders to unknown DNA profiles from crime scenes.  <u>DNA Analysis</u>: Processing offender DNA samples to develop DNA profiles.</p>
<p><b>Digital Evidence</b>          Nicole Dekat          785.296.3311</p>	<p><u>Computer Forensics</u>: Processing, imaging and analyzing of hard drives and loose media.  <u>J-Tag/Chip Off</u>: Advanced mobile forensics working directly off the circuit board or memory chip itself. This allows examiners to bypass some locked devices.  <u>Mobile Forensics</u>: Processing, extraction and analysis of mobile devices.</p>

## Forensic Science Laboratory Services

### Types of Testing Provided and Contact Information

<p><b>Firearm / Toolmarks</b> Mary Henderson 785.296.1134</p>	<p><u>Firearms, Bullet, Cartridge Cases</u>: Examination of evidence to determine whether a fired bullet, fired cartridge case or other ammunition component was fired from a particular firearm.</p> <p><u>Fracture Match Analysis</u>: Examination of evidence to determine if two items were at one time joined or bonded together as a single item.</p> <p><u>GSR Distance Determination</u>: Examination of evidence to determine the distance between the muzzle and the target at the time of discharge.</p> <p><u>Serial Number Restoration</u>: Processing evidence to restore obliterated serial numbers.</p> <p><u>Toolmarks</u>: Examination of evidence to determine whether a toolmark was created by a particular tool.</p>
<p><b>Latent Prints</b> Jackie Hayworth 785.296.2301</p>	<p><u>AFIS Database</u>: Automated Fingerprint Identification System is a database that allows for latent fingerprints and palm prints to be searched against the electronic known print database.</p> <p><u>Latent Prints</u>: Processing and examining evidence for the presence of latent prints. Comparing latent prints to inked or electronically captured known prints.</p>
<p><b>Toxicology</b> Carrie Hodges 785.296.3212</p>	<p><u>Blood Alcohol Testing</u>: Test blood and other biological samples for ethyl alcohol and other volatiles, such as methanol, isopropanol, acetone, and inhalants.</p> <p><u>Drug Testing</u>: Test biological samples for common drugs-of-abuse, prescription medications, and over-the-counter medications.</p>
<p><b>Trace</b> Dwain Worley 785.296.3039</p>	<p><u>Elemental Analysis</u>: Determine elemental make-up of evidentiary material.</p> <p><u>Fire Debris</u>: Analyze material from fire scenes for the presence of accelerants.</p> <p><u>Primer Gunshot Residue (PGSR)</u>: Analyze evidence for the presence of primer gunshot residue particles that result from the firing of a weapon.</p>

The following resources are also available to assist you:

*Digital Evidence Submission Form*

*DNA Submission Form*

*Evidence Custody Receipt*

*Evidence Submission Guidelines*

*Forensic Collection Kit Request Form*

*Notice to KBI Forensic Science Laboratory Customers*
